AHRI stays in robust health with SAP Business One

The Africa Health Research Institute combines lab-based and population-based science in one world-class research organisation, focused on identifying a cure for TB and HIV. The organisation's staff, investigators and management benefit from SAP Business One, which supports streamlined, efficient processes, and makes detailed information readily available. This transparency of results helps to maintain funders' confidence and ensure an exciting future for AHRI.

Before: Challenges and Opportunities

- Merger of two organisations combining lab-based and population-based science into a world-class research group
- Multinational investigators needed accurate, transparent information
- Looking to grow funders' confidence

Why SAP and Partner

- Good relationship with Seidor, consultative support has helped the business to grow
- SAP Business One provides all the detailed information required and more

After: Value-Driven Results

- Improving diagnosis and prevention by leveraging SAP Business One data
- Reports are much more streamlined, efficient and transparent – valued by investigators and management
- Grants management add-on simplifies administration and reporting
- Considering the addition of SAP HANA real-time capability to make even greater use of data-driven insight

“The future for AHRI is extremely exciting as a global research organisation. We expect to grow and gain more confidence from funders as we continue with SAP Business One.”

Dilip Kalyan, Chief Financial Officer, AHRI Africa Health Research Institute.
