SAP Business One lifts the spirit of Agro Chemical & Food Company

Agro-Chemical and Food Company Limited (ACFC) was established in 1978 to produce power alcohol from sugarcane molasses. This was to be blended with petrol to make gasohol as a national strategy for reducing foreign exchange used to purchase petroleum oil. This programme did not succeed due to non-cooperation of oil companies and the company, through research and development efforts, shifted to producing various grades of spirits and yeast.

Before: Challenges and Opportunities

- On our previous system the information was inaccurate and reports were not timely
- Some functions had to be done separate from the accounting system

Why SAP and Partner

- SAP Business One has the ability to integrate all the other functions into one system
- The Human Capital Management system that is integrated into SAP Business One assures all our needs are met
- Seidor Africa has made the transition easy

After: Value-Driven Results

- The system is a lot more flexible and we can now report on the different aspects of our business that is key for us
- The customer service platform has assisted us in managing not only our customers, but also our suppliers
- Paperwork has been reduced and we now use SAP Business One as our main source for planning

"We have improved our business and the way we work."

Ashok Agrawal. Director. Agro Chemical & Food Company.
