SAP Business One assists Eastern Africa Grain Council to grow with their crop

The Eastern Africa Grain Council (EAGC) is a membership organization of the grain stakeholders in Eastern Africa. The stakeholders represent the three main sectors of the grain value chain including traders, farmers, and processors.

The aim of EAGC is to support structured grain trade within the Eastern and Southern Africa region. Grains include cereals (maize, wheat, rice, barley, sorghum, millet, and rye), pulses (dry beans, dry peas, dry broad beans, chickpeas, cowpeas, lentils, pigeon peas and other edible seeds of the legume family) and oilseeds such as sesame, sunflower and soybean.

Before: Challenges and Opportunities

- We needed a system that is more robust and can grow with us
- We also had to use a multi-currency system and have better visibility over our controls as is our policy

Why SAP and Partner

- Seidor Africa is always available to answer and assist
- SAP Business One is a very stable system
- SAP Business One is more than an accounting system. They bring all our teams and departments together to ensure we understand our overall business better, and we all align and achieve on our mandates

After: Value-Driven Results

- We now have a comprehensive view of the whole procurement process
- Customizable reports make it easier to give each stakeholder the information they need
- Funding is spent better and each transaction is traceable from start to finish

"SAP Business One is in the world class league of ERP Systems."

Gerald Masila. Executive Director. Eastern Africa Grain Council.
