Excellerate sees rapid value from adoption of SAP Business One

Excellerate aims to become Africa's leading provider of facilities management and property-related services. Following significant mergers and acquisitions, the business was looking for an ERP solution that could be rapidly deployed out of the box, with ease of use to drive widespread adoption. Within 24 months, Excellerate migrated 12 of its entities onto SAP Business One and is now achieving substantial operational efficiencies by standardising its business processes across the group.

Before: Challenges and Opportunities

- Needed to replace legacy DOS-based systems
- Looking for an ERP solution that would enable rapid deployment and adoption
- Multiple entities within the group following M&A activity

Why SAP and Partner

- SAP Business One provides the required functionality without custom configuration
- SAP Business One is easy to use, supporting faster adoption
- Seidor Africa is supportive and provides greater flexibility than a traditional consulting model

After: Value-Driven Results

- Our employees now have more time to focus on what is important and not get stuck in too much administration
- Our visibility on our business has increased substantially with the implementation of SAP Business One

“ We really get to deliver efficiencies in a new way into our business, through how our employees operate and interact with the systems as well as what the system does for our business.”

Justin Moore, CEO, Excellerate Services.
