## One Acre Fund sows the seeds of prosperity with SAP Business One

Founded in 2006, One Acre Fund is a non-profit social enterprise that supplies small-scale farmers in East Africa with everything they need to grow more food and earn more money. Funded in part by grants, the organization needed to demonstrate accountability and chose SAP Business One to streamline its financial processes and inventory management, and provide full traceability of grants across multiple currencies.

### Before: Challenges and Opportunities

- Outgrowing legacy accounting package and reliant on manual, error-prone spreadsheet-based processes
- Operating across six countries in the region and growing by 20% annually
- Needed to streamline back-office processes with an integrated solution that would enable expense tracking across multiple currencies
- Audit preparation required two months' full-time work and data was inaccurate

### Why SAP and Partner

- SAP Business One supports multi-currency operations and presented an opportunity to standardize on a solution used by organizations worldwide without customization
- Initial scope of on-premise deployment spanned the Finance function and subsequently expanded to Procurement and inventory management before migrating to the cloud in 2018

### After: Value-Driven Results

- We are now able to provide instant, confident answers to business questions with visibility into reliable data, such as payments outstanding or stock levels
- Ability to fully track project expenses for smallholder farmer beneficiaries across the region
- Accurate financial reporting dramatically reduced the time required for audit preparation

*"SAP Business One has revolutionized our operations."*

Aurelien Vetil, Director of Back Office Systems, One Acre Fund.
