## SAP Business One gives SNF ChemQuest better understanding of all their information

We supply mainly performance chemicals produced by world class manufacturers, chosen because of the quality and economy of their products. We support their use with technical service by our team of experienced metallurgists, backed up by two well equipped laboratories. We supply plant and equipment for the dissolution and dosing of the chemicals we supply. We can design, supply and commission new plants, or retrofit existing ones.

### Before: Challenges and Opportunities

- Our previous systems were not integrated
- There were several problems that we had – duplicate work being done, duplicate databases, batch processing at the end of the month, matching problems and no current stock information

### Why SAP and Partner

- SAP Business One offered standard functionality which was a good fit for our requirements and the Boyum add-on functionality allowed us to tweak the screens to our specific needs
- We received professional and positive communications from Seidor Africa who gave us the insight and feedback we needed to make an educated decision on the system that would be moving our business forward

### After: Value-Driven Results

- Processing time has been reduced and time taken to produce financial results has decreased

*Information is also more accessible and up-to-date."*

Linda Clemens, Financial Manager, ChemQuest.
